

SPINNING SODA CAN

METHOD

- 1** Start with an empty soda can and bend the tab straight up.
- 2** Attach a length of sewing thread through the tab hole and tie it off.
- 3** Fill the can halfway with water.
- 4** Lift the can by its thread and observe how it spins. The spinning of the earth gives gravity a little twist, causing the can to twist counterclockwise.
- 5** Try this again with to see if the results are the same with more members involved.
